ANTIMICROBIAL INCISE FILM

Iodine Surgical Incise Film

Povidone-iodine released across the whole procedure, on a polyurethane film that follows the body.

Sustained iodine release

Povidone-iodine in the film releases free iodine continuously during surgery. In-vitro activity against *S. aureus*, *E. coli*, *P. aeruginosa*, *C. albicans* and *A. niger*.

Conformable, breathable film

Ultra-thin polyurethane is more breathable and more elastic than polyethylene film, so it stays down on contoured sites such as the head and joints.

Optional collection pouch

Single, double and tubular pouch versions collect fluid and debris at the site and keep the field clear. Six formats, from 11 × 7 to 60 × 50 cm.

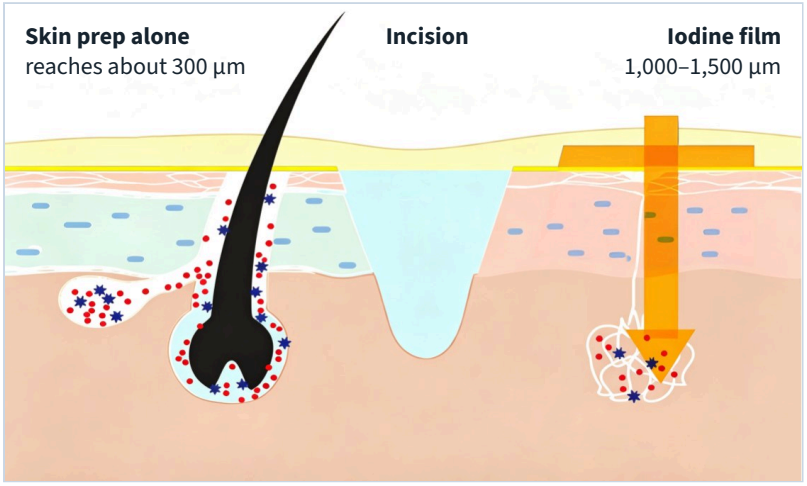

Illustration. Depth of antimicrobial effect: manufacturer data on file.

PERFORMANCE DATA

0.080–0.125 mg/cm²
Iodine content

≥ 40 µg/cm²
Iodine released over 8 hours

930–995 g/m²
Water vapour transmission of the film

CHINA · NMPA
Registered Class III drug–device combination product (2024).

EUROPE · CE (MDR)
Certification in progress. Expected 2027.

AUSTRALIA · TGA
ARTG application to follow CE, with Curavation as Australian sponsor.
