STERILE FIELD PROTECTION

# Sterile Equipment Covers

One range for robotic arms, microscopes, C-arms, cables and handheld devices, made to fit your equipment.

### Shaped to the device

Round, rectangular, three-dimensional, clear-window and spliced formats, in stock sizes or made to order for a specific device.

### A barrier around the equipment

Polyethylene or TPU film separates non-sterile equipment from the sterile field and keeps fluids off housings and probes.

### Stays where it is fitted

Elastic openings, cotton ties or adhesive strips close the cover snugly, so it goes on quickly and does not slip during the case.

FLAGSHIP

## Covers for robotic surgery systems

| | |
|---|---|
| Format | Rectangular, made to order per arm and system |
| Material | PE or TPU film |
| Sizes (cm) | 110×60 · 150×120 · 150×150 |
